

GeoPortal Help Manual

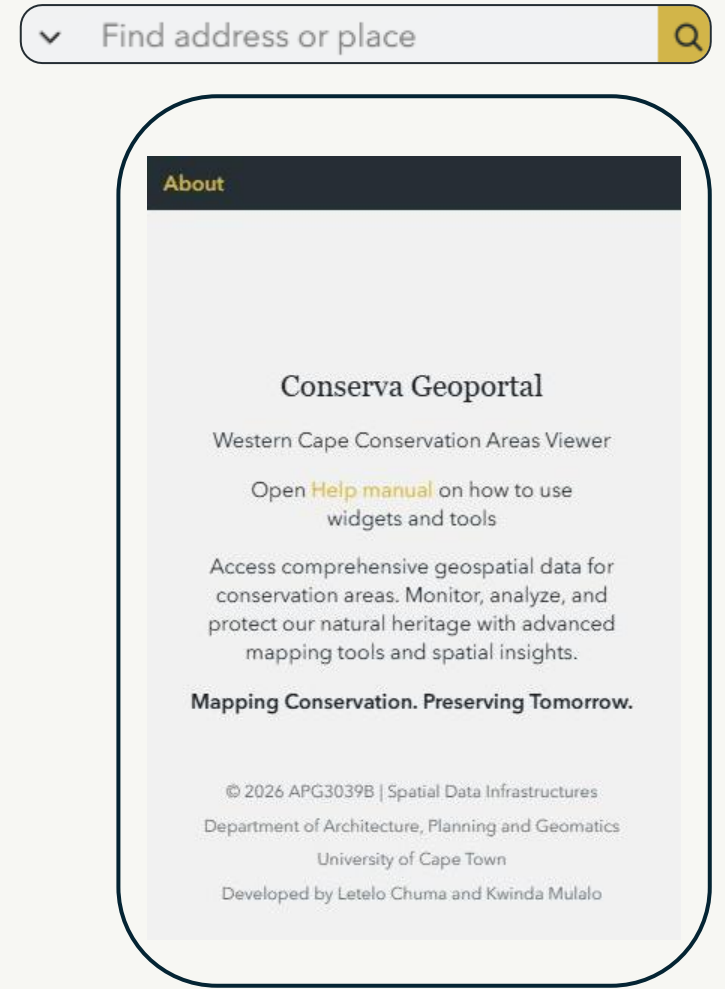

Mapping Conservation. Preserving Tomorrow.

A practical guide to the Conserva GeoPortal tools, focused on the active functions and the symbols users see in the portal.

The portal opens with the map on the left and an information panel on the right. The header tools control which panel is visible.

- Use the top search bar to find an address or place.
- Use the header icon buttons to move between tools.
- Resize or collapse the right panel with the vertical handle.

**Basemap**

Basemaps change the visual context behind the conservation layers without changing the conservation data itself.

- Click a basemap card once to make it active.
- Double click the active basemap to toggle it off.
- Use OpenStreetMap when road and place detail is helpful.

Basemap Gallery

Double click the active basemap to toggle off.

The Layer List controls which conservation datasets appear on the map. It also gives access to layer symbols and export links.

- Use the down arrow to expand or collapse grouped layers.
- Use the eye to show or hide a dataset on the map.
- Use the legend icon to inspect symbols.
- Use the three-dot menu to export and download the layer form.

A white down arrow icon on a dark background.

Down arrow

Expand or collapse groups.

A white eye icon on a dark background.

Eye

Show or hide data.

A white legend icon (three horizontal lines) on a dark background.

Legend icon

Open layer symbols.

A white three-dot menu icon on a dark background.

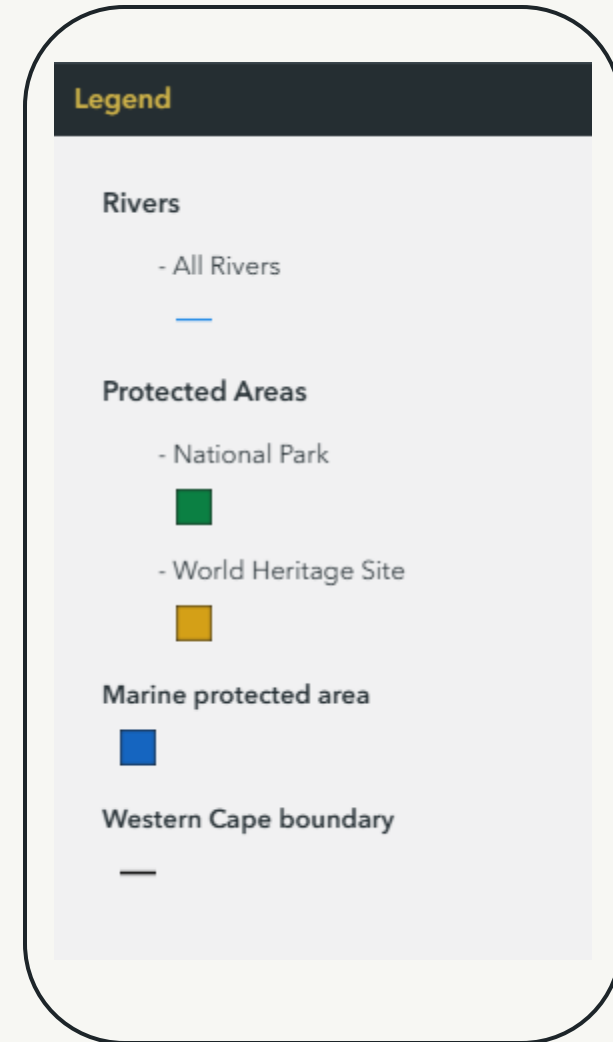

Three dots

Open Export download.

The Legend explains the colors and symbols used by the visible map datasets.

- Open the Legend tab when comparing multiple layers.
- Hidden layers are removed from the legend display.
- Use the legend together with the Layer List for clearer map reading.

M Metadata

Gold text means a metadata record is available. Text that is not gold means the portal does not currently have metadata for that dataset.

- Click a gold dataset link to open its metadata record.
- Use metadata records to confirm source information and downloads.
- Non-gold dataset names are listed for context only.
